in many people's eyes the ability for animals to be able to behave naturally is essential for their welfare however animals do not necessarily want to do behaviour just because it is natural or is seen in wild animals being chased by a predator is not necessarily good for welfare natural behaviour is important because it gives us a baseline for what animals might want to do but it cannot define good welfare on its own it has to be validated in exactly the same way as other behavioural correlates of welfare as either contributing to health or being what the animals want to do

this book examines the contents influence and potential of a personal selection of modern books published over the last fifty years that have been relevant to improving welfare the works selected comprise three earlier classics that mainly deal with animal experimentation and intensive farming as well as five that concentrate on specific subject areas namely history science applied ethics politics and law that are important to protecting the welfare of animals against suffering inflicted by humans the books are arranged in the order of their publication date and for each one a few related works are also mentioned or discussed this collection provides a broad understanding of animal protection issues and provides the necessary basis for an informed and comprehensive approach to improving the welfare of animals the books selected have been influential and they have the potential to improve animal welfare in the future

what do scientists use animals for how common is it and is it always necessary are the animals in a great deal of pain are there any alternatives

comfort during resting half closed eyes when feeding on highly palatable feed or vigorous tail wagging when being brushed are some of the positive indicators that can be used to evaluate the quality of the environment in which domestic animals live this has been a radical shift from the past as until now the welfare assessment on farms has meant assessing negative indicators namely the number of lame animals presence of lesions or frequency of agonistic behaviours however the latest research confirms that the absence of a problem or of suffering does not necessarily imply that the animals are experiencing a good life and that their level of welfare is high to guarantee high welfare standards animals should experience positive conditions that allow them to live a life worth living and positive indicators are needed to identify these conditions this special issue focuses on the development and validation of indicators of positive welfare or on the refinement of the existing ones as well as on the identification of suitable living conditions for providing positive welfare to farmed and companion animals
